

PDI UL Listed Computer Cables

PDI Presents: UL Listed Cables

You have a choice when it comes to providing computer room cables:

Choice A. Secure your non UL-Listed computer cables at every 4.5 feet under the computer room floor (per Article 300-11 and 351-8 of the 1990, Addendum to 1987 NEC)

Choice B. Purchase your UL-Listed, pre-engineered computer room cables from your PDI representative

By choosing B, you are sure of the following:

1. Quality of the product

Our cables are made to order with components of your specification. Choose from names like Hubbell, Red Dot, Crouse Hinds, Russell and Stoll, TETB, Anaconda, Southwire, Square D and GE.

2. Safety of the product

All PDI cable products are UL-Listed and labeled. PDI has met the strict requirements for UL, each cable is listed as an assembly and completely labeled for your job site.

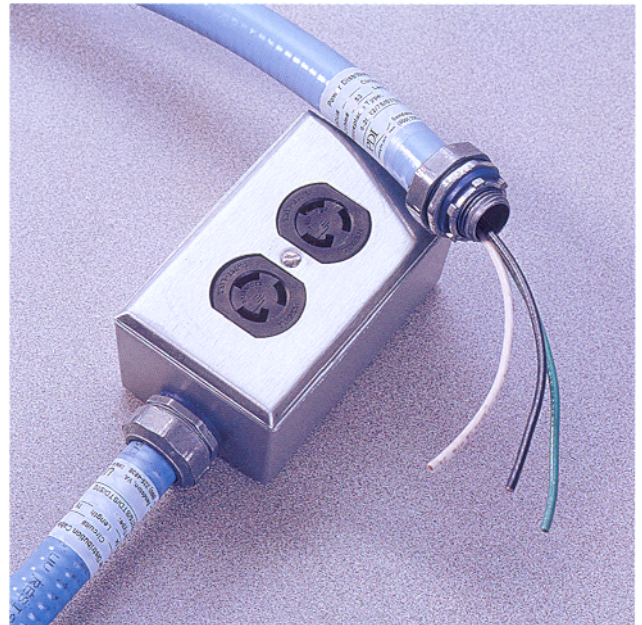

3. Speed

PDI has trained cable technicians who can meet your deadline! PDI inventories all components to meet the demands of the market.

4. Flexibility

PDI can coordinate your distribution cables to make your site manager's job easy. PDI can get your customer components if required.

PDI cables are shielded in a flexible, steel conduit encased in a copper shield to prevent electrical noise (EMI) from other cables and equipment in your data center. By labeling each cable at each end, your site manager/contractor can easily and efficiently pick out how your computer equipment is cabled. Additionally, by color coordinating the cables, you can make the initial installation and future upgrades easier and more efficient.
